STEAM STOPPER SPECIAL

Stop Bathroom Humidity, Mould & Mildew

Install a steam stopper for a warmer, dryer and healthier apartment.

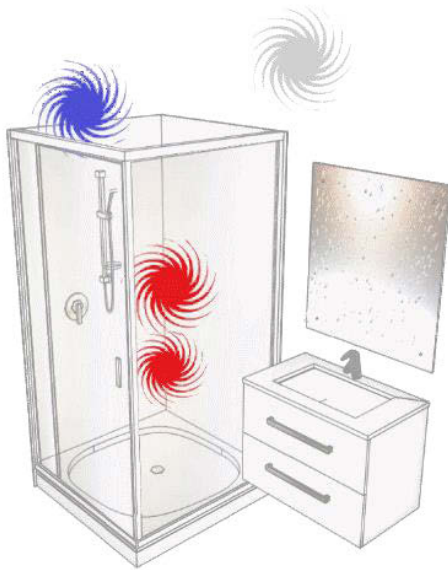

Steam stoppers are a great option for apartments as most bathrooms don't have windows and rely heavily on extractor fans to prevent moisture and mould problems.

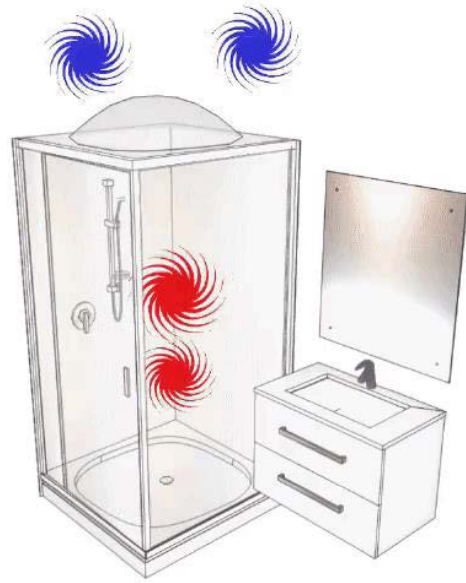

THE **MAINTENANCE GUYS**
CITY APARTMENT SPECIALISTS

HOW IT WORKS:

WITHOUT STEAM STOPPER

Steam and condensation is caused when cold air in bathroom mixes with the hot damp air in your shower cabinet. Overtime, this will result in mould, mildew and paint damage.

WITH STEAM STOPPER

Steam stopper separates the cold air in your bathroom with the hot air in your shower stopping the steam from forming and eliminating the build up of moisture outside. It also keeps the heat in, giving you a warmer shower & reduce hot water usage.

Steam stopper can be installed in most existing and new showers, easy to remove for cleaning using no more than warm water and a soft cleaning cloth.

No more misted-up mirrors, mould and peeling paint. Providing a cleaner, healthier environment for yourself or your tenants for only **\$390+GST** fitted!
